Customer Reviews

I really like the Molymod Molecular Set for Organic Chemistry. I love that the pieces are big enough to easily work with and that the bonds can be bendable or stiff. The only thing I don't really like about it is that there aren't a lot of bendable bonds in the set to make larger molecules other than cyclooctane. That was about the only disappointment, but if you are a visual person, this product will most surely get you through Organic I and possibly Organic II (currently taking that). Good luck with your studies though regardless of what product you decide on. It's all about personal preference in the end.

Came in a reasonable amount of shipping time, and the product was what I ordered. It was actually much larger than I thought it would be and contained everything I needed. Thank you!

Don't buy this the molecules broke just by putting it on and taking it off
