# Solutions Manual Inorganic Chemistry 3e

## Synopsis

This updated solutions manual contains detailed worked solutions to the problems contained in the third edition of Inorganic Chemistry. This manual is a useful tool in helping students to grasp problem-solving skills and should prove invaluable to both lecturers and students who are using the main Inorganic Chemistry text.

## Customer Reviews

I find this book frustrating. The presentation is very poor. Topics are broached willy-nilly with paltry discussion. Sometimes it's just plain laughable. For example, Box 1.3, discussing the particle in the box: "There is one further restriction that we shall simply state: the boundary condition for the particle in the box is that [the wavefunction] must be zero when  $x=0$  and  $x=a$ ." Instead of a simple statement of this and expecting the student to take it on authority, why not give the \*reason\* for these boundary conditions, which can be summarized in a single sentence, i.e. 'the wavefunction must be continuous with the region outside the box, which is also zero'? Another example from the first chapter: the section "Ground state electronic configurations: experimental data". After I read this section I couldn't help but think to myself "where's the experimental data? what was the point of this section?" Which leads to my second criticism: who is this book for? It's too advanced for undergraduates and not advanced enough for graduates. This book attempts to be all-things-to-all-people, in my opinion, which makes it good for no one. It's as though the authors took an undergraduate text and added a few more bits here and there, sporadically, without rhyme or reason. This may or may not be the reason that this book weighs SIX pounds. The authors tried

to shoe-horn too much into this book. Finally, the aesthetics of the book are atrocious. The color scheme used is distracting and hard on the eyes. Dark primary colors and light pastels on the same page?!? On some pages you can count up to six different colors used for separate things. I feel like my eyes are being pulled every direction and find it difficult to concentrate on the text.
